1 Observe

One company, many systems

Email Re: renewal terms

Chat login errors again today

Calendar pricing review, Thursday

CRM stage moved to Negotiation

Support SSO login fails

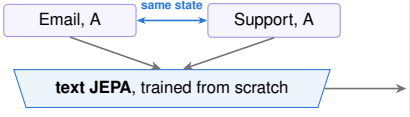
Calls “the outage cost us a week”

Issues token refresh drops sessions

customer A, Q3 · customer B, Q3 · customer C, Q3

2 Learn from links

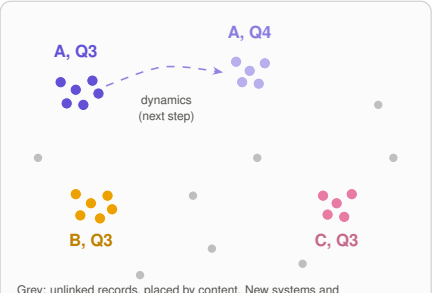
Records that different systems link to the same customer in the same quarter are **good views**: two observations of one situation.



Bad views: two corrupted copies of one record. The model learns the wording.

Next-token prediction: the model learns the language.

3 One shared state space



Grey: unlinked records, placed by content. New systems and new model versions join the space by one rotation.
